### New Epson Image Enhancement IC Balances Lower Power Consumption and Colorful Images

**Seiko Epson** Corporation has announced the development of the S2D13782F, an image enhancement IC for use in medium- and small-size liquid crystal display (LCD) panels. Adopting Epson's original image enhancement technology, the new IC effectively reduces the level of power consumption in LCD panels, while simultaneously correcting the picture to realize richly colorful screen displays.

## Slimline Displays

Noritake  
itron

### Slimline Displays from Noritake-Itron

You can edit the internal messages using the compact IR keyboard or a PC software and 'print' to the display. The 8000 character memory can be divided into multiple messages of varying length with functionality including scroll left, right, up and down, flash, dissolve, run slow or fast, delay run and orientation. Commands for mounting the display vertically or horizontally.
